

Nat Spirit

Enamel

combines aesthetic appeal, durability, heat resistance and ease of cleaning, making it a versatile choice for everyday professional use.

Enamel – discovered as far back as over few hundreds years ago - is a material produced by fusing powdered glass to a metal substrate at high temperatures (about 850°C).

Covering steel elements with enamel protects the base material from rust and guarantees health and safety.

All products undergo regular and rigorous testing according EU regulations 1935/2004.
